SAVE TIME WITH SMARTLIST OPTIONS

Here's a great time saver for SmartList users.

Click on the Administration button, then on Setup>System>Smartlist Options. You can select default fields, views, and maximum records for the Smartlists you have to otherwise modify after launching. You can also enable the Match Case checkbox by default.

NEW IN GP 2018 R2 - ASSIGN SHARED BENEFIT AND DEDUCTION MAXIMUMS

With the release of Microsoft Dynamics GP 2018 R2, it's now possible to assign a shared calendar year maximum for groups of benefits and/or groups of deductions. This will be a huge benefit to your organization for employees who may contribute to two 401K plans. In prior versions of Microsoft Dynamics GP, calendar year maximums can be assigned to one benefit and/or one deduction. It was not possible to set up a 'shared' maximum amount.

ADVANTAGES OF USING DYNAMICS GP ANALYTICAL ACCOUNTING

Analytical Accounting is a tool that helps you to analyze, interpret, and create reports based on your company's chart of accounts.

Using Analytical Accounting, you can better assess your company's accounts. You can also store information which cannot be computed in monetary terms such as labor hours. You can enter detailed analysis information without resorting to segmental accounting and create budgets using analysis dimensions and compare your actual figures with budgeted figures.

With Analytical Accounting, you can:

- set up unlimited analysis dimensions.
- enter analysis information for a group of analysis dimensions.
- create budgets using the analysis dimensions you've set up.

SAVE TIME WITH FULL CIRCLE BUDGET

Full Circle Budget is an Excel add-in that processes budgets directly from **any Excel worksheet layout** you decide to use into Microsoft Dynamics GP.

[Click here](#) for an overview of this time-saving product.

For more information, call Tommy Tastet at 985-892-2710 or email him at tommyt@diamond-soft.com.

- perform comprehensive reporting by exporting analysis queries to Microsoft Excel.

[This Microsoft article](#) has instructions on how to set up, activate, and use Analytical Accounting. You can also access the user guide [here](#).
